***The Conference Board Leading Economic Index® (LEI) for the U.S. Increased in June***

***Resurgence of new COVID-19 Cases Threatens Recent Gains***

**NEW YORK, July 23, 2020...**The Conference Board Leading Economic Index® (LEI) for the U.S. increased 2.0 percent in June to 102.0 (2016=100), following a 3.2 percent increase in May and a 6.3 percent decrease in April.

“The June increase in the LEI reflects improvements brought about by the incremental reopening of the economy, with labor market conditions and stock prices in particular contributing positively,” said Ataman Ozyildirim, Senior Director of Economic Research at The Conference Board. “However, broader financial conditions and the consumers’ outlook on business conditions still point to a weak economic outlook. Together with a resurgence of new COVID-19 cases across much of the nation, the LEI suggests that the US economy will remain in recession territory in the near term.”

**The Conference Board Coincident Economic Index® (CEI)** for the U.S. increased 2.5 percent in June to 96.7 (2016=100), following a 1.6 percent increase in May and an 11.8 percent decrease in April.

**The Conference Board Lagging Economic Index® (LAG)** for the U.S. decreased 2.5 percent in June to 110.8 (2016=100), following a 1.2 percent decrease in May and a 3.1 percent increase in April.

### Summary Table of Composite Economic Indexes

	2020			6-month
	Apr	May	Jun	Dec to Jun
Leading Index	96.9 r	100.0 r	102.0 p	
Percent Change	-6.3 r	3.2 r	2.0 p	-8.4
Diffusion	20.0	70.0	70.0	10.0
Coincident Index	92.8 r	94.3 r	96.7 p	
Percent Change	-11.8 r	1.6 r	2.5 p	-9.8
Diffusion	0.0	75.0	75.0	0.0
Lagging Index	115.0 r	113.6 r	110.8 p	
Percent Change	3.1 r	-1.2 r	-2.5 p	1.9
Diffusion	42.9	28.6	35.7	57.1

p Preliminary r Revised

Indexes equal 100 in 2016

#### **About The Conference Board Leading Economic Index® (LEI) for the U.S.**

The composite economic indexes are the key elements in an analytic system designed to signal peaks and troughs in the business cycle. The leading, coincident, and lagging economic indexes are essentially composite averages of several individual leading, coincident, or lagging indicators. They are constructed to summarize and reveal common turning point patterns in economic data in a clearer and more convincing manner than any individual component – primarily because they smooth out some of the volatility of individual components.

The ten components of **The Conference Board Leading Economic Index®** for the U.S. include:

Average weekly hours, manufacturing

Average weekly initial claims for unemployment insurance

Manufacturers' new orders, consumer goods and materials

ISM® Index of New Orders

Manufacturers' new orders, nondefense capital goods excluding aircraft orders

Building permits, new private housing units

Stock prices, 500 common stocks

Leading Credit Index™

Interest rate spread, 10-year Treasury bonds less federal funds

Average consumer expectations for business conditions
